1   1. (Currently amended)   A mechanism for a terminal service organization enlisting a

2   customer for a web-service, comprising:

3   means for providing an avenue by which said terminal service organization can refer said

4   customer to said web-service; ~~wherein said avenue identifies said terminal service organization to said~~

5   ~~web-service;~~, further comprising:

6   means for identifying said terminal service organization to said web service organization as

7   included in a request form;

8   means for said customer using said avenue to engage said web-service to provide at least one

9   web-service product customized by at least one instruction from said customer, to create a web-site

10   revenue for said web-service; and

11   means for said terminal service organization receiving an organization revenue based upon said

12   customer using said avenue to create said web-site revenue;

13   wherein said terminal service organization includes at least one member of the collection

14   comprising: a funeral home, a retirement community, a hospice, a hospital, a sanitarium, a temple, a

15   synagogue, a mosque, a church, a shrine, a nursing home, a mausoleum, a cemetery, and an assisted

16   living facility;

17   wherein said web-service product includes at least one web-site component, which is an

18   instance of a member of the web-site component collection;

19   wherein said web site component collection comprises an audio stream, a video stream, an

20   interactive model, a text, a still frame, a web page layout, a security control, a hosting means for at

21   least a second of said web-site components, a transferring means for at least one of said second web-

22   site components, and an interactive means for generating at least one of said second web-site

23   components.

1   2. (Original)   The mechanism of Claim 1, wherein said web-site component collection further

2   includes at least one member of the web system collection comprising: a memorial web page system,

3   a personal web page system, a family web page system, and a community web page system.

1   3. (Original)   The mechanism of Claim 1, wherein said instruction includes at least one member of

2   an instruction collection about at least one of said web site components.

2

1   4. (Original)   The mechanism of Claim 3, wherein said instruction collection includes an addition

2   instruction for said web-site component, a removal instruction for said web-site component, an

3   alteration instruction for said web-site component.

1   5. (Original)   The mechanism of Claim 1, further comprising at least one member of the collection

2   comprising:

3   said web-service product provided to a means for serving a community;

4   said hosting means is locally accessible by at least one member of said community;

5   wherein said community includes at least one instance of at least one member of the

6   community type collection comprising: a nuclear family, an extended family, a distributed family, an

7   intentional community, a professional community, a fraternal community, a local community, and a

8   religious community.

1   6. (Original)   The mechanism of Claim 5, wherein the means for serving said community is

2   comprised of at least one member of the collection comprising:

3   said web-service product used by at least one local computer system operated by at least one

4   member of said community;

5   a web-site hosting said web-service product accessible only by said community members; and

6   a local means for hosting said web-service product accessible by said community members.

1   7. (Original)   The mechanism of Claim 1, wherein said hosting means is comprised of at least one

2   member of the hosting means collection comprising:

3   a host web-site providing at least said second web-service component;

4   a network capable server hosting said host web-site;

5   a local server hosting said host web-site; and

6   a local computer system providing at least said second web-service component;

7   wherein each of said local server and said local computer system are imperceptible to local

8   area networks in the vicinity of said housing means.

1   8. (Original)   The mechanism of Claim 1, wherein said transferring means is comprised of at least

2   one member of the transfer means collection comprising:

3   a removable memory device provided by said web-service containing at least said second

4   web-site component;

5   a download provided by said web-service containing at least said second web-site component;

6   and

7   a shipping means for said hosting means; and

8   shipping said removable memory device.

1   9. (Original)   The mechanism of Claim 1, wherein said avenue includes a computer system

2   identifying said customer and identifying said terminal service organization, to said web-service, to

3   provide said customer instruction to said web-service.

1   10. (Original) The mechanism of Claim 9, wherein said computer system is further comprised of a

2   program system including at least one program step residing in a memory accessibly coupled to a

3   computer, at least partially implementing the steps comprising:

4   indicating said terminal service organization to said web-service;

5   identifying said customer to said web-service; and

6   providing said customer instruction to said web-service.

1   11. (Original) The mechanism of Claim 10, wherein the program step identifying said customer is

2   further comprised of the program step said customer determining the mechanism for providing said

3   revenue to said web-service.

1   12. (Original) The mechanism of Claim 10, wherein the program step providing said customer

2   instruction is further comprised of the program steps of:

3   providing said customer with a menu containing at least one instruction option;

4   said customer indicating at least one instruction option to create a customer instruction; and

5   sending said customer instruction to said web-service.

1   13. (Currently amended)   The mechanism of Claim 1, wherein said ~~avenue at least partially~~

2   ~~implemented as a~~ request form further comprising:

3   means for identifying said customer to said web-service;

4

4   means for providing said instruction to said web-service; and

5   means for identifying said terminal service organization perceptible by at least said web-

6   service.

1   14. (Original) The mechanism of Claim 13, wherein said request form is a member of the request

2   media collection comprising: a computer accessible request form, a paper request form, and an audio

3   accessible request form.

1   15. (Original) The mechanism of Claim 14, wherein the means for identifying said terminal service

2   organization in said paper request form includes at least one member of the collection comprising:

3   a bar code marking identifying said terminal service organization;

4   a background marking identifying said terminal service organization; and

5   a foreground marking identifying said terminal service organization.

1   16. (Original) The mechanism of Claim 1, wherein the means for said terminal service organization

2   receiving said organization revenue includes at least one member of the revenue reception collection

3   comprising:

4   means for a bank account controlled by said terminal service organization receiving a

5   monetary transfer of said organization revenue; and

6   means for said terminal service organization receiving a check for said organization revenue.

1   17. (Original) The mechanism of Claim 1, wherein the interactive means comprises a stream

2   generation component, an interviewer component and an editor component;

3   wherein said stream generation component include generating at least one member of the

4   collection comprising said text, said audio stream and said video stream;

5   wherein said interview component includes a member of an interviewer option collection,

6   comprising a no-interviewer option, a minimal interviewer option, a maximal interviewer option;

7   wherein said interview component further includes an interview language selection;

8   wherein said editor component includes a member of the editing collection comprising a no-

9   editing option, a minimal editing option, a more editing option, and a maximal editing option.

1 18. (Currently amended)   A method for a terminal service organization enlisting a customer for a

2 web-service, comprising the steps of:

3   providing an avenue by which said terminal service organization can refer said customer to

4 said web-service;

5   said avenue identifying said terminal service organization to said web-service, further

6 comprising the step of:

7   identifying said terminal service organization to said web service organization as included in a

8 request form;

9   said customer using said avenue to engage said web-service to provide at least one web-

10 service product customized by at least one instruction from said customer, to create a web-site

11 revenue for said web-service; and

12   said terminal service organization receiving an organization revenue based upon said customer

13 using said avenue to create said web-site revenue.

1 19. (Original) The method of Claim 18, wherein said terminal service organization includes at least

2 one member of the collection comprising: a funeral home, a retirement community, a hospice, a

3 hospital, a sanitarium, a temple, a synagogue, a mosque, a church, a shrine, a nursing home, a

4 mausoleum, a cemetery, and an assisted living facility.

1 20. (Original) The method of Claim 18, wherein said web-service product includes at least one web-

2 site component, which is an instance of a member of the web-site component collection; and

3   wherein said web site component collection comprises an audio stream, a video stream, an

4 interactive model, a text, a still frame, a web page layout, a security control, a hosting means for at

5 least a second of said web-site components, a transferring means for at least one of said second web-

6 site components, and an interactive means for generating at least one of said second web-site

7 components.

1 21. (Original) The method of Claim 18, wherein said web-site component collection further includes

2 at least one member of the web system collection comprising: a memorial web page system, a

3 personal web page system, a family web page system, and a community web page system.

1   22. (Original) The method of Claim 18, wherein said instruction includes at least one member of an

2   instruction collection about at least one of said web site components.

1   23. (Original) The method of Claim 22, wherein said instruction collection includes an addition

2   instruction for said web-site component, a removal instruction for said web-site component, an

3   alteration instruction for said web-site component.

1   24. (Original) The method of Claim 18, further comprising at least one member of the collection

2   comprising the steps of:

3   providing said web-service product to a means for serving a community; and

4   at least one member of said community locally accessing said hosting means;

5   wherein said community includes at least one instance of at least one member of the

6   community type collection comprising: a nuclear family, an extended family, a distributed family, an

7   intentional community, a professional community, a fraternal community, a local community, and a

8   religious community.

1   25. (Original) The method of Claim 24, wherein the step of serving said community is comprised of

2   at least one member of the collection comprising the steps of:

3   at least one local computer system operated by at least one member of said community using

4   said web-service product;

5   a web-site hosting said web-service product accessible only by said community members; and

6   hosting said web-service product locally accessible by said community members.

1   26. (Original) The method of Claim 18, wherein said hosting means is comprised of at least one

2   member of the hosting means collection comprising:

3   a host web-site providing at least said second web-service component;

4   a network capable server hosting said host web-site; a local server hosting said host web-site;

5   and

6   a local computer system providing at least said second web-service component;

7   wherein each of said local server and said local computer system are imperceptible to local

7

8   area networks in the vicinity of said housing means.

1   27. (Original) The method of Claim 18, wherein implementing said transferring means is comprised

2   of at least one member of the transfer means collection comprising the steps of:

3   providing a removable memory device containing at least said second web-site component;

4   providing a download containing at least said second web-site component; shipping said

5   hosting means; and

6   shipping said removable memory device.

1   28. (Original) The method of Claim 18, wherein said avenue includes a computer system identifying

2   said customer and identifying said terminal service organization, to said web-service, to provide said

3   customer instruction to said web-service.

1   29. (Original) The method of Claim 28, wherein said computer system is further comprised of a

2   program system including at least one program step residing in a memory accessibly coupled to a

3   computer, at least partially implementing the steps comprising:

4   indicating said terminal service organization to said web-service;

5   identifying said customer to said web-service; and

6   providing said customer instruction to said web-service.

1   30. (Original) The method of Claim 29, wherein the step identifying said customer is further

2   comprised of the step of said customer determining the mechanism for providing said revenue to said

3   web service.

1   31. (Original) The method of Claim 29, wherein the step providing said customer instruction is

2   further comprised of the steps of:

3   providing said customer with a menu containing at least one instruction option;

4   said customer indicating at least one instruction option to create a customer instruction; and

5   sending said customer instruction to said web-service.

1   32. (Currently amended)   The method of Claim 18, wherein said avenue at least partially

2 ~~implemented as a~~ implementing said request form, further comprising the steps of:

3   identifying said customer to said web-service;

4   providing said instruction to said web-service; and

5   identifying said terminal service organization perceptible by at least said web-service.

1 33. (Original) The method of Claim 32, wherein said request form is a member of the request media

2 collection comprising: a computer accessible request form, a paper request form, and an audio

3 accessible request form.

1 34. (Original) The method of Claim 33, wherein the step identifying said terminal service

2 organization in said paper request form includes at least one member of the collection comprising the

3 steps of:

4   a bar code marking identifying said terminal service organization;

5   a background marking identifying said terminal service organization; and

6   a foreground marking identifying said terminal service organization.

1 35. (Original) The method of Claim 18, wherein the step of said terminal service organization

2 receiving said organization revenue includes at least one member of the revenue reception collection

3 comprising:

4   receiving a monetary transfer of said organization revenue into a bank account controlled by

5 said terminal service organization; and

6   receiving a check for said organization revenue by said terminal service organization.

1 36. (Original) The method of Claim 18, wherein the interactive means comprises a stream generation

2 component, an interviewer component and an editor component;

3   wherein said stream generation component include generating at least one member of the

4 stream collection comprising said audio stream and said video stream;

5   wherein said interview component includes a member of an interviewer option collection,

6 comprising a no-interviewer option, a minimal interviewer option, and a maximal interviewer option;

7   wherein said editor component includes a member of the editing collection comprising a no-

8 editing option, a minimal editing option, a more editing option, and a maximal editing option.

1 37. (Original) The method of Claim 36, wherein said stream collection further includes said text.

1 38. (Original) The method of Claim 36, wherein said interview component further includes an

2 interview language selection.

1 39. (Original) Said avenue provided to said customer, said customer instructions, said web-service

2 products, said web-site revenue, and said organization revenue as products of the process of Claim

3 18.
